

“Bre3D Award – Innovations from Bremen”

We were delighted to participate as nominees for the Bre3D Award - Innovations from Bremen and to present our own product, the Powered SunAwning, a fully functional awning manufactured using advanced 3D-printing technology and developed as a high-quality exhibition prototype.

At the i2b meeting at ECOMAT, companies, researchers and technology enthusiasts came together.

The atmosphere was shaped by visionary ideas and bold technical solutions that clearly demonstrate how 3D printing is transforming product development and prototyping.

For us, it was the perfect opportunity to show that our awning is far more than a concept: it is a technologically mature product that integrates seamlessly into Bremen's innovation landscape and opens new perspectives for future series production.

A heartfelt thank-you to i2b and all organizers for this inspiring event!
