

„Elegance meets extreme resilience“

We present our innovative patented product

Engineered for strong wind conditions, the shading system unparalleled stability and peace of mind, even in gusts up to 8 BFT (62 km/h).

Its unique tensioning technology ensures consistently firm fabric alignment, maintaining both form and function under the harshest environments.

Whether installed offshore — on yachts, boats, and ships — or in windy onshore settings such as coastal areas, mountain regions, or high-rise terraces, the system offers sophisticated shading with timeless style and exceptional durability.

- # Patented system with continuous support elements
- # Made from AISI 316L, electropolished or manual high gloss polished finish
- # Wind stable up to 8 Bft.
- # Wide range of textiles available
- # Small installation space required
- # Integrated water spray system (optional)

We have been awarded the BSFZ seal for our innovative competence as a research and development company. Seidelmann-Yacht Sun Awning System is protected by the German and the European Patents offices.
